Re: Hen Island Rye, NY Site # 27

Dear Mr. Meyerson:

Per our conversation, we are submitting this letter to describe the work to be performed at the referenced location.

The existing summer cottage has fallen into disrepair and is to be rebuilt per plans submitted to the City of Rye for municipal approval. The existing cottage had two bedrooms and was serviced by a composting toilet with two sinks and one shower tied into an existing grey water system. The existing grey water system shows no signs of past failure.

The foot print of the cottage will remain the same with no increase in square footage, no increase in the number of bedrooms and no increase in plumbing fixtures. We intend to replace the removed composting toilet with a new incinerating toilet and tie the two new sinks and shower into the existing grey water system.

Please contact me if you require any additional information.

Respectfully yours,

Gary Ederer
